Noah Saffer

(973) 220-2114 | 199 Bowery Apt 2D, New York, NY 10002

EDUCATION

WASHINGTON UNIVERSITY IN ST. LOUIS

College of Engineering
Dean's List
Cumulative GPA of 3.4

Double Major
BS in Computer Science
May 2020 | St. Louis, MO

BS in Computer Engineering
May 2020 | St. Louis, MO

SKILLS

PROGRAMMING

Proficient:
Python • Java • Swift
Significant Familiarity:
C++ • Bash • C • HTML • CSS • XML
Slight Familiarity:
Assembly • C# • Javascript • Spark • Hive • Pig

APPLE PLATFORMS

ScreenCaptureKit • VideoToolbox (HEVC) • Network.framework • CryptoKit • SwiftUI • UIKit • AppKit • TestFlight

INFRASTRUCTURE AND TOOLS

Azure Blob Storage • Azure DevOps • Azure Virtual Networks • Amazon Web Services • Azure Virtual Machines • Azure Cloud Pools • GitHub Actions • Claude Code

HARDWARE

- 32-bit microprogrammed RISC CPU on an FPGA, extended on my own time (VHDL, Verilog)
- Bluetooth-to-VGA adapter on an FPGA, driven from a mobile app (VHDL, ExpressPCB)

MADE IN LaTeX

EXPERIENCE

MICROSOFT CORP. | Senior Software Engineer

Summer 2019 - Present | New York, NY

- Developed infrastructure architecture used in silicon manufacturing production on all generations of Maia and Cobalt 1P products to assist with chip test by designing systems leveraging Azure cloud technology
- Created Azure DevOps integrated CI/CD workflows with multiple build validation pipelines using Azure cloud pools, version control documentation and standards (PRs) for multiple engineering teams totaling over 100 members
- Generated and operated on many terabytes of data across different data centers and local sites in the US, Malaysia, South Korea, Taiwan and more
- Designed custom Microsoft file format for manufacturing data transport and data transfer systems in collaboration with semiconductor fabrication manufacturing partners
- Designed and developed infrastructure and spec to take Design Verification outputs and create Automated Test Equipment (Advantest 93K) compatible binary pattern files along with custom operating sequence generator
- Worked with organization verticals to enable infrastructure that takes manufacturing data and binning information and creates die fusing recipe for 1P products
- Worked in lab to identify Vmin on Xbox Series X CPU and GPU

SILL | Creator and Maintainer

September 2026 - Present | getsill.app | github.com/Saffsanity/sill

- Architected, designed and published a free, open-source (Apache 2.0) iOS app that streams any window from a Mac to iPhone and iPad, with touch, trackpad, keyboard and Apple Pencil input and iPhone Duo layouts: Swift on macOS and iOS, ScreenCaptureKit capture, hardware HEVC encoding, TLS-paired local and remote transport, no servers and no accounts
- Launch: #1 Mac Streaming app on the App Store (5.0 stars, 40 reviews), #2 on Hacker News, 672K-view launch video, 25K+ iOS users and 25K+ Mac downloads in the first two weeks
- 4,100+ GitHub stars and 34 community contributors submitting Android, Windows, Linux and visionOS clients; CI and mutation-tested checks on every pull request, tag-triggered releases, TestFlight and App Store uploads from the command line
- Built end to end with Claude Code: custom skills, workflows, MCP servers and artifacts for each part of the development, marketing, video and design process; AI for iteration and prototyping, with every architecture and product decision my own

AMAZON.COM, INC. | Software Development Engineer Intern

Summer 2018 | Seattle, WA

- Twelve week internship in which I created and deployed software to production for Amazon Prime Video with one downstream consumer in production.
- Created a directed acyclic graph to perform a pipelined workflow for Live Video and Just After Broadcast data. Furthermore, I helped the artwork team with their workflow by pioneering the live events workflow described above.
- Gave input on the high-level design of Prime Video's live events architecture within the Code Design Review (CDR) and Project Design Review (PDR) processes and defined in-production POJOs, abstract classes and interfaces.
